

Help! I'm Lost!

PAWS Atlanta offers Microchips

Here's How It Works:

1. We inject a tiny microchip under your pet's skin using a large needle. The microchip is implanted in the area of the shoulder blades.
2. You receive a copy of your pet's microchip number so that you can register their number with 24 Pet Watch. Go to <https://microchip.24petwatch.com> to create an account for your pet.

**Registration is free but additional services are available for purchase.

3. If your pet ever becomes lost, they can be checked for a microchip at any shelter or veterinary clinic with a microchip scanner. Once your pet's microchip is registered, 24 Pet Watch will contact you if your pet is found and scanned.

- Microchips are a form of permanent identification for your pet.
- PAWS Atlanta uses microchips that meet international standards for permanent pet identification.
- Microchips do NOT have GPS capabilities.
